

Sundeep Mathur

Vice President, FinTech AI Consulting | Tavant

Sundeep Mathur has spent more than 35 years at the intersection of mortgage lending and technology — as a practitioner who has built systems that changed how the industry works.

His career began at Freddie Mac, where he led the development of Loan Prospector and architected the industry's first mortgage scorecard — laying the groundwork for automated underwriting that would eventually make homeownership more accessible to millions of borrowers. From there, he led the development of e-MITS, a risk-based pricing and automated underwriting engine at IndyMac Bank, and held senior technology leadership roles at Washington Mutual and Citizens Business Bank.

Now serving as Vice President of FinTech AI Consulting at Tavant, Sundeep works with banks and lenders to identify where AI can meaningfully improve the lending experience; reducing friction for borrowers, improving operational efficiency for lenders, and strengthening risk and regulatory compliance for investors. His recent work includes LO.ai, an Agentic AI solution designed to guide Loan Officers through the origination process in ways that ultimately serve the borrower better.

What distinguishes Sundeep is not only his vision for what technology can do in lending, but his track record of actually delivering it. Across more than 40 enterprise programs; leading teams of up to 120 people and overseeing budgets as large as \$150M; he has translated strategy into working systems that transformed how lenders originate, underwrite, and serve borrowers. That combination of deep industry knowledge and hands-on execution is what has driven meaningful, lasting change to transform the lending industry.

Recognition & Thought Leadership

HousingWire Vanguard Award | 2018

Progress in Lending Thought Leader Award | 2021

15+ publications and panels on AI, automation, and the future of mortgage finance (2016–2024)
